AB- <BASIC> SU 1449416 A

wider functional capability of the universal wagon allows carrying
both liquids and solids. Its upper edges, side and end walls have
shelves, and inside the wagon body is a vertically moved pontoon with the
upright tube set in the zone of the drain hole. The profile of the
pontoon bottom is made congruent to the bottom of the wagon body, while
the upper outer parts of the edges of side and end walls of the pontoon
carry a seal interacting with the walls of the wagon body and with the
above mentioned shelves. The top of the tube is fitted with a sealing
liq featuring a safety valve, and the pontoon walls have holes holding
tubes with ends projecting outside the pontoon and closed by removable
plugs.

The slings of the crane lift the pontoon and then lowering it to
plane on the bottom of the wagon body without the shelf (9) and then
the profile strap is fitted together with the lip seal bearing against
the pontoon and against the wagon side and end walls (4,5). The opening
of the drain hole (7) of the wagon body is closed and water is poured
through the opened aperture of the pontoon to expel air. The water is
poured into the wagon till the seal reaches the upper edges of wagon
walls at a distance sufficient for mounting the shelf (9).

USE/ADVANTAGE - For transporting liquids and solids partic. fuel
oils. The wagon eliminates shocks and vibrations of the bogies during
the passage of the rail joints, the vibrations being absorbed by the
